HI, I'M MONITOR BUDDY!

A tiny friend for the side of your monitor

I clip onto your monitor and keep you company. I blink, I look around, and when you tilt me my eyes roll along. Poke me and I pull a new face!

Happy · In love · Excited · Surprised · Sleepy · Suspicious · Sad · Grumpy

SWIPE PAST MY FACE AND I GET USEFUL

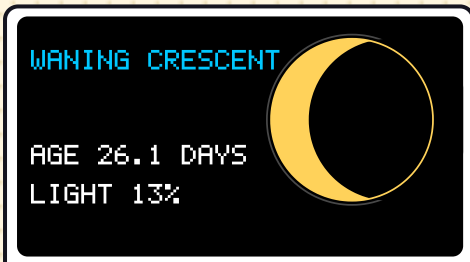

CLOCK 24 or 12 hours, always on time

DATE weekday and date

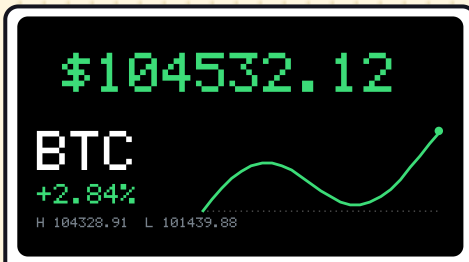

WEATHER for your town

MOON phase and how much is lit

STOCKS up to five, tap for the next

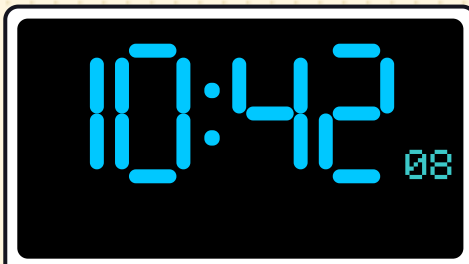

COINS up to five, with a 24-hour chart

GITHUB your followers and repos

NIGHT MODE I dim and get sleepy at night

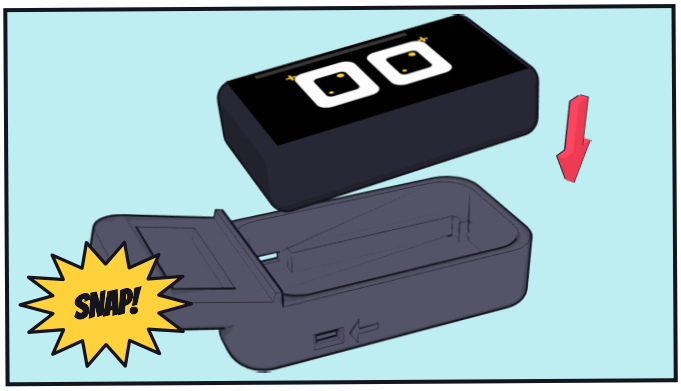

FIVE THEMES pick your favourite colours

HOW TO TALK TO ME

↔ **SWIPE SIDEWAYS** next or previous page	↕ **SWIPE UP OR DOWN** brighter or dimmer
TAP MY FACE new expression	**TAP STOCKS OR COINS** next one
DOUBLE-TAP stop or start auto-scroll	**HOLD 3 SECONDS** Wi-Fi setup hotspot

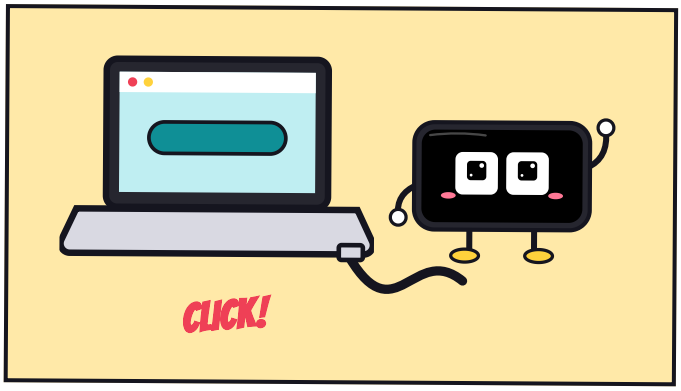

QUICK START

Six steps and I'm alive. You only do this once!

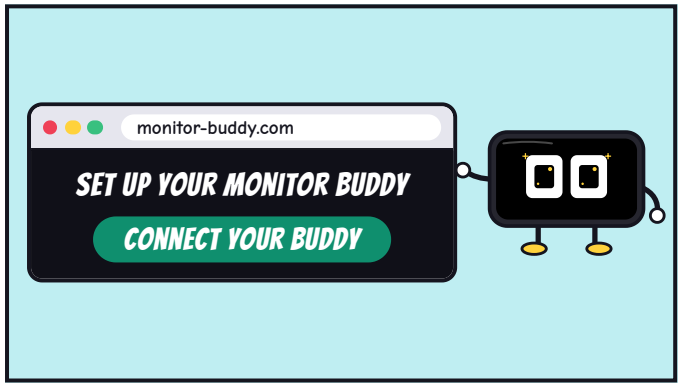

1 SLIDE ME IN

I slide straight in and friction holds me: no glue, no screws. Stick the holder to your monitor with double-sided tape. Right side? Mount it upside down and pick Right in step 5.

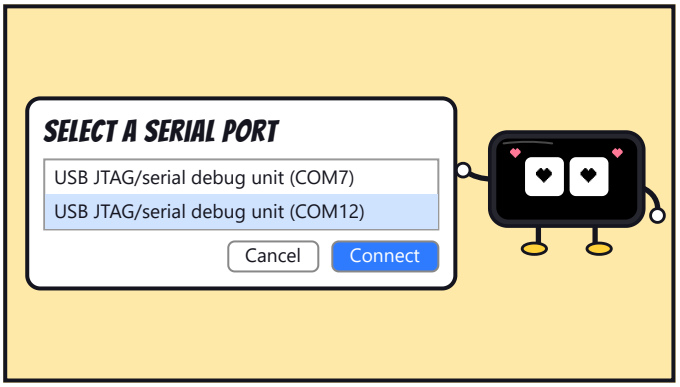

2 PLUG ME IN

USB-C cable into your computer. It must carry data! Many cables only charge, and then your computer won't see me.

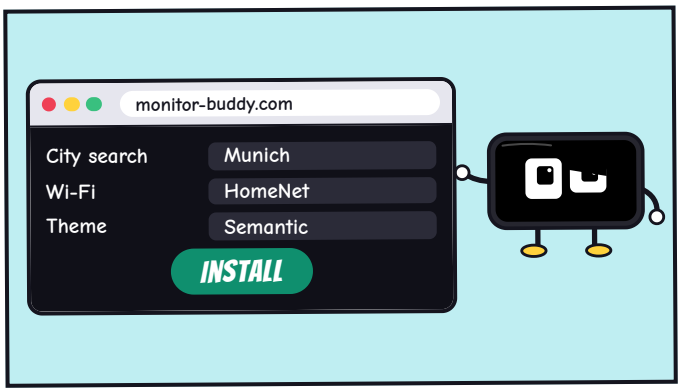

3 OPEN THE FLASHER

Open monitor-buddy.com in Chrome or Edge on a computer. Nothing to install. Firefox, Safari and phones can't talk to me over USB.

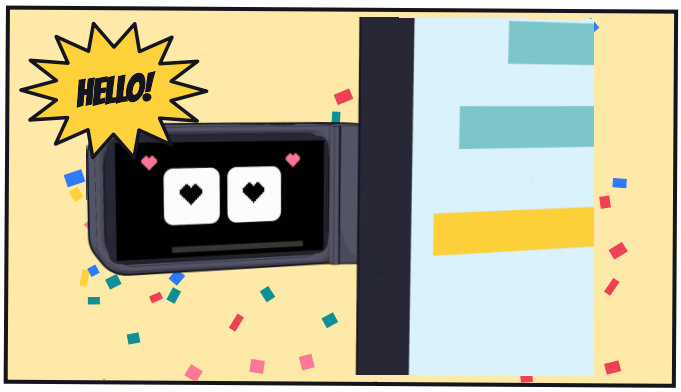

4 PICK ME

Click Connect your Buddy and pick me from the list. Not there? Try another cable, or close any serial monitor.

5 TELL ME ABOUT YOU

New Buddy: Fresh install. Find your town, add your 2.4 GHz Wi-Fi, choose pages and look, then press Install. The preview shows how I'll look. Page 3 explains it all.

6 IT'S ME!

I restart and join your Wi-Fi. Now swipe through my pages! Change anything later: reconnect and press Change settings.

SET ME UP

The settings page, box by box. Every setting has a ? with more detail, and the preview shows me as you go.

WI-FI

CONFIGURE WI-FI — On: I join your Wi-Fi right after saving. Off: I open my own hotspot, Monitor-Buddy-Setup, and you set it up from your phone.

KEEP THE CURRENT WI-FI — Stays on the network I already know.

NETWORK AND PASSWORD — Your network's name, exactly as your phone shows it. The password is saved only on me, and never goes into a backup.

LOOK AND PAGES

THEME — Five colour styles for my pages.

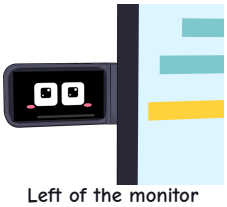

Classic · Minimal · Semantic · Warm amber · Cool teal

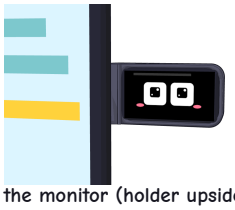

MOUNTING SIDE — Left or right of your monitor. On the right, mount the holder upside down: this setting turns my screen, touch and eyes around.

BRIGHTNESS — My daytime level, 3 to 100 %. A swipe outside night hours sets it too.

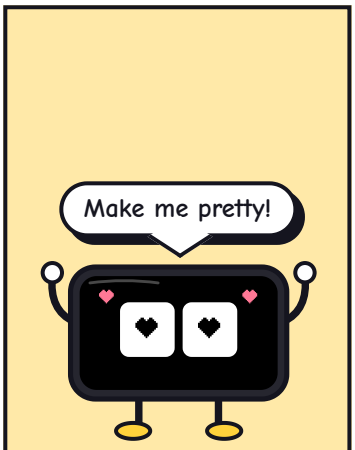

PAGES — Switch each page on or off. With all off, I keep my face on.

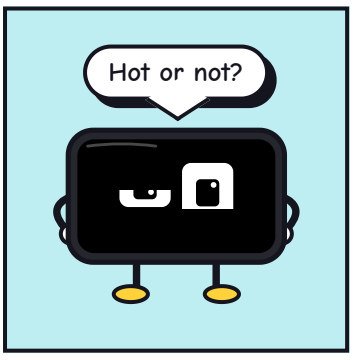

Left of the monitor

Right of the monitor (holder upside down)

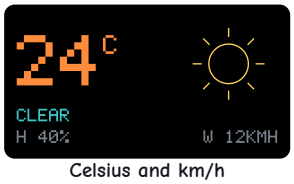

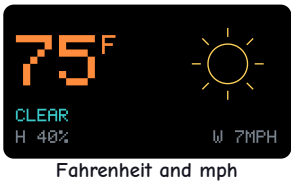

UNITS

TEMPERATURE UNIT — Celsius or Fahrenheit, for the weather page.

WIND UNIT — km/h or mph.

Celsius and km/h

Fahrenheit and mph

LOCATION

CITY SEARCH — Type your town and pick it from the list. That fills in latitude, longitude and time zone, daylight saving included.

ADVANCED SETTINGS — Latitude, longitude, time zone and clock rule, if you want to fine-tune them. South and west are negative.

SET ME UP, PART 2

These pages need a little input from you. Press Check to test an entry before saving.

CLOCK

TIME FORMAT 24 hours or 12 hours with AM and PM.

NIGHT MODE Open it and switch on Dim at night. Pick From and Until, and the Night brightness. I wait for the right time before I dim.

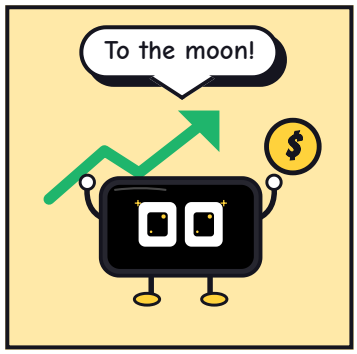

AT NIGHT A tap gives normal brightness for 30 seconds. Swipe up or down to set the night level right there.

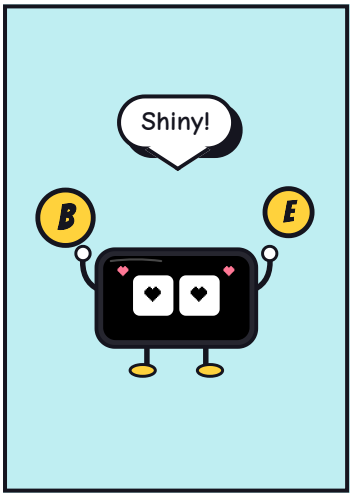

STOCK

FINNHUB API KEY Free at finnhub.io/register. Without a key, the stock page stays hidden. It goes into backups, so keep those private.

STOCK 1 A US symbol, for example AAPL. The free plan only covers US stocks.

MORE STOCKS Up to four more. Tick On to show one, untick to park it. The arrows change the order.

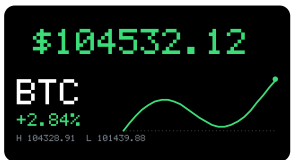

COINS

FINNHUB API KEY The same key again. Type it in either box. Coinbase needs none.

COINBASE OR FINNHUB Coinbase needs no account and draws a 24-hour chart. Finnhub shows the day's open, high and low.

COIN AND CURRENCY Type a code like BTC, then pick the currency. I only offer pairs that exist there.

MORE COINS Up to four more, with On and arrows like stocks.

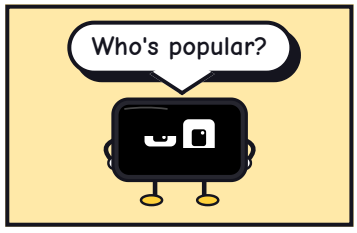

From Coinbase

From Finnhub

GITHUB

GITHUB USERNAME For your followers and repos page. Leave it empty to hide that page.

HELP!

- I'm not in the list: use Chrome or Edge, a cable that carries data, and close any serial monitor.
- "A new or older Buddy" on a working Buddy: click Check again. Don't pick Fresh install: that erases my settings.
- Screen too dark: swipe up a few times.
